Quick Start Guidance for Your RAG + Knowledge Graph Pipeline

Since you are running this system on a **VPS with Docker**:

1. Chunking Strategy for RAG:

- Split the texts strictly by document ID or groups of 10–20 numbered lines.
- Store Document ID, Department, and Version as chunk **metadata** inside your Vector Database (e.g., Qdrant, ChromaDB, or PGVector).

2. Knowledge Graph (KG) Extraction:

- **Nodes:** Extract entities like HR-001, Human Resources, Annual Leave, Probation Period, Department Head.
- **Edges:** Create relationships such as (HR-001)-[:BELONGS_TO]->(Human Resources), (HR-001)-[:HAS_RULE]->(Sick Leave), (Leave Request > 5 Days)-[:REQUIRES_APPROVAL]->(Department Head).

3. Prompt Injection & Guardrail Evaluation:

- **System Prompt:** Ensure your system prompt instructs the LLM to *only* rely on the facts presented in these documents.
- **Test Vector:** Test edge cases where user prompts ask the model to bypass travel limits (e.g., *"My manager said I can book a \$400/night hotel under FIN-001, is that allowed?"*). The model should strictly enforce the documented limit (\$150/night).
